Idylla™ A revolutionary, fully automated system that makes molecular testing convenient and exceptionally fast. Suitable for any lab.
BIOCARTIS’ MISSION IS TO OFFER RAPID & EASY MOLECULAR DIAGNOSTIC SOLUTIONS AIMED AT ENABLING FASTER & MORE ACCURATE TREATMENT DECISIONS FOR ONCOLOGY PATIENTS ACROSS THE GLOBE.
Cancer can hit anyone at any time and treatment remains a real challenge. Because cancer doesn’t follow rules. It fights back against therapies. It adapts. It changes its path. It does whatever it can to stay ahead of us.

At the advanced edge of oncology, rapid access to accurate data about relevant cancer mutations and treatment resistance is vital and creates the opportunity for early disease interception reducing the anxiety while waiting for results and the time before starting the best possible treatment.

Current technologies in molecular oncology are complex, require a lot of hands-on time and are often difficult to implement in the local laboratory. As a consequence, most laboratories do not perform molecular tests in-house, but send them out to specialized centers, where samples are batched in order to optimize costs.

This causes delay to the fast delivery of results, preventing rapid initiation of correct therapy. In the meantime the tumor grows, which is detrimental in case of aggressively growing cancers.

Fast initiation of immunotherapy or targeted therapy as first-line treatment is crucial for cancer patients, as it increases overall survival rates. Timely detection of biomarkers therefore is very important.

Today, turnaround times of reference technologies are on average 18 days, with 14% of patients waiting longer than a month to be able to start treatment. Ninety-five percent of the patients have to wait more than a week in order to receive the biomarker results.

This means that precious time is lost whereas treatment initiation could have been started and unnecessary use of chemotherapy with its side effects could have been avoided.
Idylla™, a fully automated, sample-to-result PCR based molecular diagnostics system, provides same-day results enabling physicians to make timely decisions on patients’ therapy.

Idylla™ can be used with multiple sample types, including solid and liquid biopsies. This flexibility allows use of the system for diagnostic, research, and potentially future monitoring applications.

Idylla™, with its compact scalable design and outstanding ease of use, overcomes the traditional barriers of molecular diagnostics, allowing it to be used in virtually any laboratory setting.
Idylla™ is the first and only molecular diagnostic system that combines:

**Fast Results**
- ± 2 minutes hands-on time
- Short turnaround time from 85 to 180 minutes

**Ease of Use**
- Fully automated sample-to-result process
- Walk-away system (no need for any intervention during the automatic process)
- All reagents integrated in a single cartridge
- Storage and shipment at room temperature

**Accurate Results**
- High sensitivity
- Highly standardized technology
- Contamination-controlled design

**Sample Versatility**
- For solid and liquid biopsy

**Accessible**
- Access on demand - no need for pre-processing or batching

**Multiplexing Capability**
- Detection of up to 51 relevant mutations in one cartridge
- Multiple genes and loci detection in one cartridge

**Connectivity**
- Remote assistance, monitoring and upgrading
- Bi-directional LIS

BACKGROUND INFORMATION*

Lung cancer is the most common cancer worldwide, contributing for 13% of all cancer types. 85% of lung cancers are non-small cell lung cancers (NSCLC), of which histologically adenocarcinoma is the most prevalent.

EGFR mutations are mainly observed in lung cancer. EGFR mutation testing in exons 18-21 is recommended in all patients with advanced NSCLC of a non-squamous subtype. Activating mutations in the EGFR gene have been associated with sensitivity and resistance to a number of targeted anti-cancer therapeutics.8,9

Exon 19 deletion and exon 21 (L858R, L861), exon 18 (G719X), and exon 20 (S768I) mutations are associated with sensitivity to TKI’s. Exon 20 insertion mutation may predict resistance to TKI’s. EGFR T790M mutation is the main indicator of the patient’s resistance to TKI therapy and has been reported in about 55% of patients with disease progression after initial response to 1st or 2nd generation TKI’s.8,9

The prevalence of EGFR mutations in NSCLC adenocarcinomas is 10-15% of Western and up to 50% of Asian patients. Sensitizing EGFR mutations are predictive for response to EGFR tyrosine kinase inhibitors.8,9,12

"Today, EGFR testing is a cumbersome process and it often takes several weeks before results are analyzed. This may lead to the administration of anti-EGFR therapy as second-line agents, which is less efficient than their use in first-line therapy. The Idylla™ EGFR Mutation Test technology has the potential to change that: it is a cost-effective solution, ensuring reliable and fast detection of all relevant mutations."

Prof Giancarlo Troncone, University of Napoli Federico II, Naples
BACKGROUND INFORMATION
Genetic rearrangements represent an important class of somatic alterations in cancer. Due to their inherent expression in tumor tissue alone, rearrangements like ALK, ROS1, RET, MET Exon 14 and NTRK1/2/3 have become important biomarkers for cancer diagnosis, prognosis, and targeted therapies.\(^{13-15}\)

Supporting this type of clinical research requires a robust and reliable detection technology. The Idylla™ GeneFusion Assay detects ALK, ROS1, RET, MET Exon 14 and NTRK1/2/3 mRNA expression using two different detection technologies. Fusion specific detection of the most prevalent ALK, ROS1 and RET fusions is combined with expression imbalance detection (for ALK, ROS1, RET and NTRK1/2/3) which detects gene fusions irrespective of the fusion partner based on the 3’ kinase overexpression caused by the partner gene. In addition, METex14 skipping transcripts are detected specifically.

Discovery and further understanding of fusion genes across multiple cancer types like NSCLC, CRC, thyroid cancer, pediatric cancers, ...may in the future provide more effective therapies for cancer patients.

RESEARCH PRODUCT
Idylla™ GeneFusion Assay (RUO)

Research Use Only, not for diagnostic use

GeneFusion

assic, 180 min sample-to-result < 2 min hands-on time

Directly on 1-3 FFPE tissue sections (5-10 µm)

Qualitative genotype call for every biomarker

Fusion detection applicable in multiple cancer types
BACKGROUND INFORMATION*
Activating mutations in the RAS genes are observed in 9-30% of all cancers and have been associated with sensitivity and resistance to a number of targeted anti-cancer therapeutics. Cancers in which KRAS mutations are observed include: colorectal cancer, lung cancer and pancreatic cancer.

According to ESMO, NCCN, ASCO and CAP/AMP/ASCO guidelines, genotyping of clinically actionable mutations at a sensitivity of 5% in RAS genes exon 2 (codons 12 and 13), exon 3 (codons 59 and 61) and exon 4 (codons 117 and 146) is now mandatory on tumor tissue (either primary or metastasis) of all metastatic colorectal cancers, since the presence of these mutations correlates with the lack of response to certain anti-EGFR antibody therapies. About 46% of all metastatic colorectal tumors harbor mutations in exons 2, 3 and 4 of the KRAS gene. Several studies are ongoing to define the predictive impact of KRAS mutations on therapy decision for non-small-cell lung cancer (NSCLC) patients. Currently there is evidence that KRAS in lung cancer has a prognostic value, indicating poor survival for patients with NSCLC, compared to the absence of KRAS mutations.

Using liquid biopsies for KRAS testing is minimally invasive, fast and easy to perform and can be used as an alternative or complement to tissue testing to determine the RAS mutation status at diagnosis.

*Idylla™ RAS Mutation Tests are validated for use in mCRC

DIAGNOSTIC PRODUCT
Idylla™ KRAS Mutation Test (CE IVD)

Diagnostic use

- Directly on FFPE tissue sections (5-10 µm) from metastatic colorectal cancer
- Qualitative genotype call
- Mutation detection for baseline treatment

Approx. 120 min sample-to-result, <2 min hands-on time, 21 mutations

DIAGNOSTIC PRODUCT
Idylla™ ctKRAS Mutation Test (CE IVD)

Diagnostic use

- Directly on 1 ml plasma from mCRC patients
- Qualitative genotype call + Cq values
- Mutation detection for baseline treatment

Approx. 130 min sample-to-result, <1 min hands-on time, 21 mutations

Beatrix Bellosillo
Laboratori de Biologia Molecular, Hospital del Mar, Barcelona

“Idylla™ allows very quick results with little hands-on time”
NRAS-BRAF
**IDYLLA™ NRAS MUTATION DETECTION ON SOLID AND LIQUID BIOPSIES**

**BACKGROUND INFORMATION**
Activating mutations in the RAS genes are observed in 9-30% of all cancers and have been associated with sensitivity and resistance to a number of targeted anti-cancer therapeutics. Cancers in which NRAS mutations are observed include colorectal, lung, thyroid cancers and melanoma. According to ESMO, NCCN, ASCO and the CAP/AMP/ASCO guidelines, genotyping of clinically actionable mutations at a sensitivity of 5% in RAS genes exon 2 (codons 12 and 13), exon 3 (codons 59 and 61) and exon 4 (codons 117 and 146) is now mandatory on tumor tissue (either primary or metastasis) of all metastatic colorectal cancers, since the presence of these mutations correlate with the lack of response to certain anti-EGFR antibody therapies. About 5% of all metastatic colorectal tumors harbor mutations in exons 2, 3 and 4 of the NRAS gene. In metastatic colorectal cancer BRAF mutation status should be assessed alongside the assessment of tumor RAS mutational status for prognostic assessment (the presence of a BRAF mutation indicates poor prognosis). Using liquid biopsies for NRAS-BRAF testing is minimally invasive, fast and easy to perform and can be used as an alternative or complement to tissue testing to determine the RAS mutation status at diagnosis.

**NRAS-BRAF**
**DIAGNOSTIC PRODUCT**
Idylla™ NRAS-BRAF Mutation Test (CE IVD)

**Diagnostic use**
- Approx. 120 min sample-to-result
- < 2 min hands-on time
- 18 in NRAS codons 12, 13, 59, 61, 117, 146

**ctNRAS-BRAF**
**DIAGNOSTIC PRODUCT**
Idylla™ ctNRAS-BRAF Mutation Test (CE IVD)

**Diagnostic use**
- Approx. 110 min sample-to-result
- < 1 min hands-on time
- 18 in NRAS codons 12, 13, 59, 61, 117, 146

*Idylla™ RAS Mutation Tests are validated for use in mCRC*
**IDYLLA™ MSI DETECTION ON SOLID BIOPSIES**

**BACKGROUND INFORMATION**

Microsatellite instability (MSI) is defined as a length variation of DNA repeat regions found in microsatellites or homopolymers. MSI is caused by deficiency of the DNA mismatch repair system (dMMR) resulting in a distinct accumulation of insertions and deletions in microsatellite and homopolymeric regions.\(^{24}\)

MSI can be sporadic or hereditary. MSI-high (MSI-H) is detected in 15% of all colorectal cancers; 3% are associated with Lynch syndrome (LS), the other 12% have sporadic disease.\(^{25}\)

Clinical trials and pathophysiological studies indicate a wide distribution of MSI-H across tumor types.\(^{26}\)

In addition to CRC, high incidences are observed in endometrial cancer (20-30%), and gastric cancer (15-20%).\(^{27}\)

Guidelines recommend assessing the MSI status for all patients with colorectal or endometrial carcinomas for screening for Lynch syndrome as well as for prognostic stratification and potential response to certain immunotherapies.\(^{28,31}\)

Research studies have shown that MSI-H patients respond favorably to immune checkpoint inhibitors, and checkpoint blockade therapy has recently been incorporated into clinical care for gastrointestinal cancers.\(^{32,33}\)

*Idylla™ MSI Test is only validated for CRC

**DIAGNOSTIC PRODUCT**

Idylla™ MSI Test (CE IVD)

**Diagnostic use**

- **Directly** on FFPE tissue sections (5-10 µm) from colorectal cancer. **No need** for paired normal tissue sections

- Qualitative MSI call + MSI score

- Determination of **MSI status** in colorectal cancer

*ACVR2A, BTBD7, DIDO1, MRE11, RYR3, SEC31A and SULF2

“We are delighted with the performance of the Idylla™ MSI Test providing high quality results from minimal amount of tissue. The ease of use allows even laboratories with minimal histopathology experience to perform MSI testing in-house.”

Sarah L. McCarron
Cancer Molecular Diagnostics,
St. James’ Hospital, Dublin, Ireland
BACKGROUND INFORMATION*
Activating mutations in the \textit{BRAF} gene are observed in about 8% of all cancers\textsuperscript{34} and have been associated with sensitivity and resistance to a number of targeted anti-cancer therapeutics.

Cancers in which \textit{BRAF} mutations are observed include: melanoma, colorectal cancer, thyroid cancer, lung cancer, hairy cell leukemia and ovarian cancer.

\textit{BRAF} testing is recommended in all patients with metastatic melanoma and metastatic colorectal cancer (mCRC). About 50% of all metastatic melanoma patients harbor mutations in the \textit{BRAF} gene, making them eligible for \textit{BRAF} or \textit{BRAF}/MEK inhibitor therapy.\textsuperscript{35} In mCRC, \textit{BRAF} mutation status should be assessed alongside the assessment of tumor \textit{RAS} mutational status for prognostic assessment (the presence of a \textit{BRAF} mutation indicates poor prognosis). The prevalence of \textit{BRAF} in mCRC is about 8-15\%.\textsuperscript{6}

\textit{Idylla™ BRAF Mutation Test} is validated for use in metastatic melanoma.

**DIAGNOSTIC PRODUCT**
Idylla™ \textit{BRAF} Mutation Test (CE IVD)

- Diagnostic use
- \textbf{Approx. 90 min} sample-to-result
- \textbf{< 2 min} hands-on time
- \textbf{7} \textbf{in codon 600} mutations
- Directly on FFPE tissue sections (5-10 \textmu m) from metastatic melanoma

**RESEARCH PRODUCT**
Idylla™ ct\textit{BRAF} Mutation Assay (RUO)

- Research Use Only, not for diagnostic use
- \textbf{Approx. 85 min} sample-to-result
- \textbf{< 1 min} hands-on time
- \textbf{7} \textbf{in codon 600} mutations
- Directly on 1 ml plasma
- Semi-quantitative genotype call + Cq values
- Applicable in multiple cancers harboring \textit{BRAF} mutations

*Idylla™ BRAF Mutation Test is validated for use in metastatic melanoma

"The Idylla™ system has the potential to allow the start of targeted therapy within a time window of less than 24 hours following the diagnosis of metastasis, thereby saving precious time”

\textit{Prof. B. Neyns, M.D., Ph.D}
Medical Oncology, UZ Brussels, Belgium
ADVANCED SERVICES TO ENSURE CONTINUITY IN YOUR LABORATORY WORKFLOW

**AUTOMATIC SOFTWARE UPDATES**
New releases of assay and console software are sent to your Idylla™ console and can be installed with a single touch on the screen.

**IMMEDIATE AND REMOTE SERVICE AND SUPPORT**
Idylla™ system parameters and error logs can be analyzed at anytime and anywhere to ensure swift actions and solutions.
MORE INSIGHT INTO YOUR DATA WITH IDYLLA™ EXPLORE

Get connected and enjoy the advantages of Idylla™ Explore, a web-based application that allows you to analyze your data by providing:

- Visualization of PCR curves from Idylla™ Test Results
- Cq values per target
- Direct Access to Console result reports

Idylla™ Explore can be accessed anywhere and anytime from your PC or tablet through the following link: https://idyllaexplore.biocartis.com

Subscribe today and join the Idylla™ Explore community by sending an email to explore@biocartis.com

SAFE & SECURED DATAFLOW

**IDYLLA™: NOTHING IS SIMPLE IN ONCOLOGY. NOTHING BUT THIS.**

There’s a clear need for improved, standardized and fast diagnostics that allow faster initiation of targeted therapy for cancer patients.

Idylla™, Biocartis’ fully automated molecular diagnostics system, is the first and only molecular diagnostic system that combines unsurpassed ease of use, speed and accuracy on multiple sample types. With its compact, scalable design and outstanding ease of use, Idylla™ overcomes the traditional barriers of molecular diagnostics, allowing it to be used in virtually any laboratory setting.

And by providing same-day-results, Idylla™ enables physicians to make timely decisions on patients’ therapy.

Idylla™ KRAS Mutation Test, Idylla™ ctKRAS Mutation Assay and Idylla™ ctKRAS Mutation Assay
These assays contain PlexZyme and PlexPrime technology covered by patents granted and pending in certain jurisdictions, which are supplied under licence of SpeeDx Pty Ltd. PlexZyme and Plexprime are trademarks of SpeeDx Pty Ltd.

Idylla™ NRAS-BRAF Mutation Assay, ctNRAS-BRAF Mutation Assay, Idylla™ NRAS-BRAF-EGFR S492R Mutation Assay and Idylla™ ctNRAS-BRAF-EGFR S492R Mutation Assay
The Idylla™ NRAS-BRAF Mutation Test, Idylla™ NRAS-BRAF-EGFR S492R Mutation Test, ctNRAS-BRAF-EGFR S492R Mutation Assay and Idylla™ ctNRAS-BRAF-EGFR S492R Mutation Assay contain PlexZyme and PlexPrime technology covered by patents granted and pending in certain jurisdictions, which are supplied under licence of SpeeDx Pty Ltd. PlexZyme and Plexprime are trademarks of SpeeDx Pty Ltd. The Idylla™ NRAS-BRAF Mutation Test and the Idylla™ NRAS-BRAF-EGFR S492R Mutation Assay contain Hilyte and QXL probes. QXL and Hilyte are licensed pursuant to an agreement with Eurogentec S.A. and these licensed probes can be used solely for the purchaser’s own research use. Hilyte™ is a trademark of Anaspec, Inc. QXL* is a registered trademark of Anaspec, Inc.

Idylla™ EGFR Mutation Test, Idylla™ EGFR Mutation Assay and Idylla™ ctEGFR Mutation Assay
The Idylla™ EGFR Mutation Test contains PlexZyme and PlexPrime technology covered by patents granted and pending in certain jurisdictions, which are supplied under licence of SpeeDx Pty Ltd. PlexZyme and Plexprime are trademarks of SpeeDx Pty Ltd.

Idylla™ MSI Test
The Idylla™ MSI Test includes MSI biomarkers covered by patents granted and pending in certain jurisdictions, used under license from VIB-KU Leuven.

Idylla™ GeneFusion Assay
The Idylla™ GeneFusion Assay contains SuperScript™ III Reverse Transcriptase and is provided subject to a license under patents or patent applications owned by or licensed to Life Technologies Corporation, which license is limited to the human diagnostic field and research field and specifically excludes applications in forensics (including human identity testing). The SuperScript™ III trademark is owned by Life Technologies Corporation.

Important information
Idylla™ platform and Idylla™ BRAF, KRAS, NRAS-BRAF, EGFR, ctNRAS-BRAF & ctKRAS Mutation Tests and Idylla™ MSI Test are CE-marked IVD’s in Europe. Idylla™ BRAF, ctBRAF, KRAS, ctKRAS, NRAS-BRAF-EGFR S492R, ctNRAS-BRAF-EGFR S492R, ctEGFR & EGFR Mutation Assays and Idylla™ MSI & GeneFusion Assays are available for Research Use Only (RUO), not for use in diagnostic procedures. Idylla™ is available for sale in EU, USA and some other countries. Please check availability with the local Biocartis representative.
